

Available QGP Firm Forward Capacity (TJ/d)

Last updated 20 August 2018*

Year	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
2018									0	0	0	0
2019	0	0	0	0	0	0	0	0	0	0	0	0
2020	8	8	8	11	11	11	11	11	11	11	11	11
2021	11	11	11	11	11	11	11	11				

The primary source for our capacity forecasts is our annual QGP asset report that presents the outcome of our capacity planning engineers' (at least) annual review of the pipeline hydraulic modelling. This report confirms the most up to date and accurate modelling representation the physical pipeline system, and is used for capacity management, control room, expansion and works planning, day-to-day operation, maintenance and outage planning, and emergency management and survival time. This report's modelling is our reference for the current QGP pipeline capacities and linepack for the varying scenarios of summer and winter periods and operational compressor maintenance.

We then overlay known sales and contract terms, and forecast loads against these to identify the capacity available for sale.
