

Capacity Trading

Jemena's new trading portal makes it easier for shippers to buy, sell and transfer firm forward-haul capacity. The portal is updated daily and includes current and historical trading information for a more open and flexible trading market. Visit <http://jemena.com.au/industry/pipelines/capacity-trading>

Connecting capacity and demand

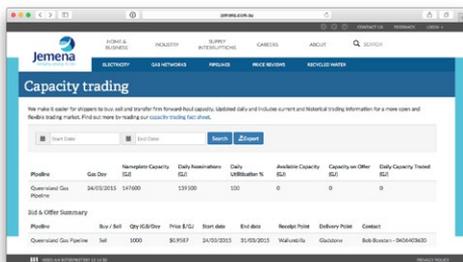

The east coast gas market is evolving. The development of significant unconventional gas resources and the emergence of liquefied natural gas (LNG) export capacity on the east coast have introduced new dynamics into our domestic gas market.

This means shippers need more information about available pipeline capacity and flexible, streamlined trading arrangements to utilise capacity to suit their business needs.

By advertising sought and available capacity and facilitating confidential trades, Jemena's online portal makes trading simpler, reducing the time shippers need to spend sourcing and negotiating deals.

As the trading process is administered by Jemena, shippers can be assured of the confidentiality of their trades. Only offers, capacity sale listings and trading data are made public.

How it works

Shippers connect to our trading portal to notify Jemena of capacity sought or available for sale.

We enter that information on the portal. Shippers then search the site

to find the capacity they need. Prices and terms of trades are negotiated privately offline.

Once agreement is reached, the seller advises Jemena of the details of the trade and the buyer confirms the details. The capacity of each of the parties is then adjusted in pypIT.

Shipper's existing Firm MDQ will be split into 'Contract MDQ' and 'Operational MDQ'.

Shippers with a GTA can transfer firm capacity, allowing for nominations and allocations to be made directly with Jemena by the buyer, maintaining confidentiality. Existing Shippers will need to vary their GTA to enable trading of capacity. New Shippers can sign up to a Standard GTA with zero Contract MDQ.

Why use this service?

Our service makes it easier for shippers to connect and make trades, while maintaining appropriate confidentiality about the utilisation of traded capacity. The burden on sellers to administer information transfer and other contract obligations is reduced.

Where is the service offered?

Initially, we are offering capacity trading on the Queensland Gas Pipeline (QGP). This is a key pipeline servicing the Wallumbilla Gas Supply Hub and central Queensland's industrial base at Gladstone and Rockhampton.

We anticipate capacity trading will be offered on the Eastern Gas Pipeline (EGP) in the future.

How do I access the service?

To trade capacity on Jemena's Capacity Trading Portal, shippers need to have a gas transportation agreement with Jemena.

Our service is voluntary and shippers remain free to trade capacity independently.
