

Independent Auditor's Report

To the Directors of Jemena VicHub Pipeline Pty Ltd

Report on the audit of the financial information within the Financial Reporting Guideline for Non-Scheme Pipeline Templates

Opinion

We have audited the *Financial Information* of Jemena VicHub Pipeline Pty Ltd (Service Provider).

In our opinion, the accompanying Financial Information of the Service Provider for the year ended 31 December 2022 is prepared, in all material respects, in accordance with the Financial Reporting Guideline for Non-Scheme Pipelines (the Guideline) issued by the Australian Energy Regulator (AER) on 19 December 2017 and the Basis of Preparation as prescribed by the Guideline. The *Financial Information* is the information within Tables 2.1, 2.1.1, 2.2.1, 2.2.2, 2.3.1, 2.4.1, 3.1, 3.1.1, 3.2.1, 3.2.2, 3.3.1, 3.3.2 and 3.4.1 within the Financial Reporting Guideline for Non-Scheme Pipeline Templates for the year ended 31 December 2022.

Basis for opinion

We conducted our audit in accordance with *Australian Auditing Standards*. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Our responsibilities under those standards are further described in the *Auditor's responsibilities for the audit of the Financial Information* section of our report.

We are independent of the Service Provider in accordance with the ethical requirements of the Accounting Professional and Ethical Standards Board's APES 110 Code of Ethics for Professional Accountants (including Independence Standards) (the Code) that are relevant to our audit of the Financial Information in Australia. We have fulfilled our other ethical responsibilities in accordance with these requirements.

Emphasis of matter – basis of preparation and restriction on use and distribution

The Financial Information for the year ended 31 December 2022 has been prepared in accordance with the Basis of Preparation as prescribed by the Guideline.

The Financial Information has been prepared to assist the Directors of the Service Provider, for the purpose of fulfilling their reporting obligations under the Guideline. As a result, the Financial Information and this Auditor's Report may not be suitable for another purpose. Our opinion is not modified in respect of this matter.

Our report is intended solely for the Directors of the Service Provider and should not be used by parties other than the Directors of the Service Provider. We disclaim any assumption of responsibility for any reliance on this report, or on the Financial Information to which it relates, to any person other than the Directors of Service Provider or for any other purpose than that for which it was prepared.

Other Information

Other Information is financial and non-financial information in the Service Provider's annual regulatory reporting which is provided in addition to the Financial Information, the Basis of Preparation and the Auditor's Report. The Directors are responsible for the Other Information.

Our opinion on the Financial Information does not cover the Other Information and, accordingly, we do not express any form of assurance conclusion thereon.

In connection with our audit of the Financial Information, our responsibility is to read the Other Information. In doing so, we consider whether the Other Information is materially inconsistent with the Financial Information or our knowledge obtained in the audit, or otherwise appears to be materially misstated.

We are required to report if we conclude that there is a material misstatement of this Other Information, and based on the work we have performed on the Other Information that we obtained prior to the date of this Auditor's Report we have nothing to report.

Matters relating to the electronic publication of the audited Financial Information

The Auditor's Report relates to the Financial Information of the Service Provider for the year ended 31 December 2022 included on the Jemena website. The Directors of the Service Provider are responsible for the integrity of the Jemena website. We have not been engaged to report on the integrity of the Jemena website.

The Auditor's Report refers only to the subject matter described above. It does not provide a conclusion or opinion on any other information which may have been hyperlinked to/from the Financial Information.

Responsibilities of the Directors and Management for the Financial Information

Management of the Service Provider is responsible for:

- the preparation of the Financial Information in accordance with the requirements of the Guideline and the Basis of Preparation; and
- implementing necessary internal control to enable the preparation of the Financial Information that is free from material misstatement, whether due to fraud or error.

The Directors of the Service Provider are responsible for:

- overseeing the Service Provider's reporting process; and
- determining that the Basis of Preparation is appropriate to meet the needs of the AER in order to fulfil the Service Provider's reporting obligations.

Auditor's responsibilities for the audit of the Financial Information

Our objective is:

- to obtain reasonable assurance about whether the Financial Information as a whole is free from material misstatement, whether due to fraud or error; and
- to issue an Auditor's Report that includes our opinion.

Reasonable assurance is a high level of assurance but is not a guarantee that an audit conducted in accordance with *Australian Auditing Standards* will always detect a material misstatement when it exists.

Misstatements can arise from fraud or error. They are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of this Financial Information.

A further description of our responsibilities for the audit of the Financial Information is located at the Auditing and Assurance Standards Board website at: http://www.auasb.gov.au/auditors_responsibilities/ar8.pdf. This description forms part of our Auditor's Report.

Gordon Sangster *Partner* Melbourne 28 April 2023

OVERVIEW

The Australian Energy Regulator (**AER**) issued a non-scheme pipeline financial reporting guideline (**the Guideline**) in December 2017 under Part 23 of the National Gas Rules. This Guideline requires service providers of such pipelines to publish certain financial information about those pipelines.

Due to the operation of National Gas Rules Schedule 6 Rule 22, this Guideline applies to the VicHub Pipeline (**VicHub**) for the reporting period 1 January to 31 December 2022.

To apply the Guideline we have adopted the following general interpretations:

- All Jemena Group¹ legal entities that have a controlling interest in VicHub are 'service providers' and so all costs incurred, revenue earned or assets owned by those entities that relate to the pipeline should be captured and consolidated in the financial reporting templates.
- Similarly, because SGSPAA is the parent company of the Jemena Group, acquisition costs and associated dates (mainly in the Recovered Capital Method (**RCM**) template) are determined by reference to that entity for the purposes of complying with the Guideline. This means for instance that the acquisition of VicHub occurred on 1 Aug 2007 when the Jemena Group acquired the pipeline from the Alinta Group.
- Actual information includes information calculated directly from information contained in the Jemena Group's systems and other records without material judgement required. Estimated information is anything other than actual information.
- To meet the requirements of the Guideline when compiling the RCM valuation (section 4.1) VicHub undertook all reasonable steps to
 obtain historical information where this was not already available to Jemena. These steps are further explained in the RCM section
 (section 13) of this basis of preparation.
- All 'Previous reporting period' amounts have been sourced from the prior year published Gas Market Reform (GMR) templates (refer to Tables: 2.1, 2.1.1, 3.1, 3.3).
- Jemena Group costs are direct or indirect in nature. Direct costs, such as maintenance, program management, engineering support
 are directly allocated to specific assets within the Jemena Group. Jemena Group shared or indirect costs such as IT, finance, legal,
 people, safety and environment are allocated to specific assets within the Jemena Group in accordance with the principles of the
 Jemena Group Cost Allocation Methodology procedure. These principles are further explained in the Revenue and Expenses section
 (section 3) of this basis of preparation.

The rest of this basis of preparation document explains how we have populated each of the templates required by the Guideline, including by identifying where estimated data was used when actual data was not available.

As per the Jemena Group access user guide, Jemena VicHub Pipeline Pty Ltd is the service provider for VicHub, being the licensed operators. The other service providers in the Jemena Group have appointed Jemena VicHub Pipeline Pty Ltd as the responsible service provider for the purposes of publishing the financial information.

¹ The Jemena Group includes SGSP (Australia) Assets Pty Ltd (**SGSPAA**) and its subsidiaries excluding Zinfra Pty Ltd and its subsidiaries. Jemena Group costs may include charges from Zinfra Pty Ltd and its subsidiaries where they relate to the pipeline.

					References the 'Total' in 'Table 2.3.1: Indirect revenue allocation'	
Table 2.1 Statement of pipeline revenues and expenses	2.1.b	Direct Costs, Shared Costs, Earnings before interest and tax (EBIT)	Actual	ERP System (SAP)	Most of the entities within SGSPAA and its controlled entities use an Enterprise Resource Planning (ERP) system known as SAP to collect costs. VicHub as part of the Jemena Group, uses SAP to record its financial transactions. Costs are collected in planned maintenance orders (PMO) that cascade up to projects (WBS elements) in SAP based on the activity, on which an employee works or where an external supplier provides goods/services. A reporting tool (BI) is used to download the operating expenditure costs from SAP. The data is aggregated by WBS element and general ledger account code (cost element) and mapped into the relevant cost category of the template.	N/A
					Related party and non-related party The majority of costs that VicHub incurs are sourced from a related entity, the Eastern Gas Pipeline (EGP), which is part of the Jemena Group. EGP records costs that are attributable to VicHub as these business units are on the same site. The EGP and VicHub Maintenance Manager did a cost build up calculation for wage costs attributable to VicHub. An appropriate financial transaction was recorded in the accounting systems. These costs are reported in the 'related party transactions' column. Where project costs are collected directly to the pipeline and not through a related

Table	Base	Information	Population Approach			
Name	Reference	ltem	Actual / Estimate	Source	Methodology	Assumptions
					party entity they were reported in the 'amounts excluding related party transactions' column.	
					Direct costs and Shared costs	
					Direct and shared cost classification is based upon the activity/service category codes included as part of the WBS element structure for each project. An activity mapping table is used to map activities into relevant cost categories:	
					 Direct Costs: Asset Management (Asset: Strategy, Planning, Investment, Information and Management system activities), Service Delivery (Construction & Supply Chain, Maintenance & Faults, Network Control & Emergency Maintenance, Metering, Customer Service). Shared Costs: The Jemena Group only allocates costs that are specifically attributable to VicHub's Shared costs such as insurance and external audit costs. 	
					<u>Mapping into the template categories</u> The cost element description field from costs within VicHub was used to map into the template's categories (e.g. 'wages', 'other direct costs', 'employee costs', 'indirect operating expenses', etc.) VicHub has interpreted direct wages as the payroll costs assigned to staff who directly work on the VicHub.	
					Where project descriptions and activity/service category codes support classification within a more specific category

Name	Reference	ltem	Actual / Estimate	Source	Methodology	Assumptions
					Rental and leasing costs	
					Related party and non-related party:	
					• <u>Shared costs excluding related parties</u> Where project costs are collected directly to the pipeline and not through a related party entity they were reported in the 'Shared costs excluding related parties' column.	
					• <u>Shared costs paid to related parties.</u> The gross shared costs paid to related parties e.g. Finance, Legal, Managing Director are the total shared costs incurred across the Jemena Group before allocating to specific assets (e.g. pipelines, distribution networks etc.). Gross shared costs are collected in SAP at the JAM entity. It is from this entity that the allocation of shared costs occur.	
					% allocated to pipeline and total allocated to pipeline excluding related parties.	
					The Jemena Group only allocates costs that are specifically attributable to VicHub as Shared costs such as insurance and external audit costs. The Jemena Group does not allocate any broader non-pipeline specific shared costs to VicHub as the underlying drivers for cost allocation to VicHub are negligible.	

8. STATEMENT OF PIPELINE ASSETS

Table	Base Information		Population Approach	Source	Methodology	A
Name	Reference	ltem	Actual / Estimate	Source	Methodology	Assumptions
Table 3.1: Pipeline assets	3.1.a	Initial construction or acquisition costs, Additions, Capitalised maintenance or improvements, Disposals or early termination (at cost), Depreciation.	Actual	Table 3.3.1: Fixed assets at cost - pipeline assets Table 3.3.2: Shared assets at cost (less straight line depreciation)	All items were populated based on Australian Energy Regulator (AER) designed formulas which referenced the supporting 'Table 3.3.1: Fixed assets at cost - pipeline assets' and 'Table 3.3.2: Shared assets at cost'. <u>Non-core pipeline assets</u> No allocation of non-core pipeline assets has been included in Table 3.1 where there is a remote nexus with the pipeline activities such as treasury hedging financial instruments, defined benefit assets, minor assets sitting in JAM (receivables etc.), and other corporate assets etc.	N/A
Table 3.1: Pipeline assets	3.1.a.1	Other non- depreciable pipeline assets	Actual	SGSPAA Group Consolidation support schedule (Business Combination Adjustments and Goodwill) SAP	Other non-depreciable pipeline assets - SGSPAA Group Consolidation support schedule The SGSPAA Group consolidates its business combination adjustments at the SGSPAA level, meaning that it does not distribute any business combination adjustments to its subsidiary entities. The business combination adjustments are maintained in an excel spreadsheet. Business combination adjustments (original cost and accumulated depreciation) that relate to VicHub have been allocated to the categories in the template on the basis of fixed asset information contained in a	As there is no specific Goodwill category, EGP has included Goodwill in the 'Other non-depreciable pipeline assets' in the template.

8 — STATEMENT OF PIPELINE ASSETS

Table Name	Base Inf	Base Information		Source	Methodology	Assumptions
	Reference	Item	Actual / Estimate		methodology	Assumptions
					Business combination uplift schedule and input from a subject matter expert who assisted in the categorisation of these adjustments into the template categories.	
					Other non-depreciable pipeline assets – SAP TB	
					Amounts have been extracted from VicHub's Trial Balances for the reporting period and include GL accounts such as accrued receivables, inventories, deferred tax assets and amounts due from related parties.	
					SAP has functionality that records and identifies any transactions from related parties to VicHub, known as trading partner. Related party loan accounts with each trading partner entity were aggregated, where the receivable amount was greater than the payable amount the net amount was reported in 'Other non-depreciable pipeline assets'. Where the payable amount was greater than the receivable amount the balance was a net liability and therefore not included in 'Other non-depreciable pipeline assets' in the template. VicHub has a legally- enforceable right to set off the recognised amounts and VicHub intends either to settle on a net basis or realise the asset and settle the liability simultaneously. In accordance with accounting standards VicHub has netted off deferred tax assets and liabilities in its Balance Sheet.	

Table Name	Base information		Population Approach	0		
	Reference	ltem	Actual / Estimate	— Source	Methodology	Assumptions
Table 3.1: Pipeline assets	3.1.b	Inventories, Deferred tax assets, Other assets	Actual	SAP	VicHub's Inventories, deferred tax assets and other assets are not shared assets, they form part of Pipeline Assets and are reported on the row 'Other non-depreciable pipeline assets'. (refer to BoP reference 3.1.a for further details).	N/A

9. ASSET USEFUL LIFE

Table Name	Base Information		Population Approach	2		
	Reference	ltem	Actual / Estimate	Source	Methodology	Assumptions
Table 3.1.1: Asset useful life	3.1.1.a	Description (list each individual balance sheet item), Acquisition date, Useful life years, Reason for choosing this useful life	Actual	Table 3.3.1: Pipeline assets at cost	Description (list each individual balance sheet item) The 'Description' column was referenced from the 'Description' column as listed in: • Table 3.3.1: Pipeline assets at cost • Table 3.3.2: Shared assets at cost Acquisition date The assets in the FAMR sourced from SAP, have been aggregated into similar 'Description' items in Table 3.1.1. As there were numerous individual assets in the FAMR therefore the acquisition date is reported as 'various acquisition dates'. Useful life years A FAMR lists individual assets that contain the following information: • Asset description (text field) • Depreciation start date (date field) • Estimated useful life (years) • Original Cost (\$) • Acquisition (\$) (includes Transfers) • Disposals/retirements (\$) • Accumulated depreciation (\$) • Depreciation for the year (\$)	N/A

ASSET USEFUL LIFE — 9

Table	Base Information		Population Approach	Source	Methodology	Assumptions
Name	Reference	ltem	Actual / Estimate		metrodology	Assumptions
					Closing book value (\$)	
					The useful life for each category was calculated based on the calculated weighted average cost useful life formula below with the information sourced from FAMR.	
					$ \begin{array}{c} \text{Weighted average cost useful life equals:} \\ \sum & \frac{(Opening\ Cost + Aquisitions + Retirements)}{Total 'Description'\ Cost} \\ & *\ Asset\ useful\ life \end{array} $	
					Note that the Total Description Costs is the sum of Opening cost + Additions– Retirements.	
					Reason for choosing this useful life	
					The economic useful life of individual assets is defined in terms of the Australian Accounting Standards and the assets expected use to VicHub which may not fall within the Guideline's Appendix A – Pipeline asset lives. The estimation of the economic useful life of an asset is a matter of judgement based on the Jemena Group's experience with similar assets.	
					Additionally, economic useful life shall be considered in relation to the life assigned to similar assets within the asset category.	

10. ASSET IMPAIRMENT

Table	Base Information		Population Approach	0	Mathedalamy	Assumptions
Name	Reference	ltem	Actual / Estimate	Source	Methodology	Assumptions
Table 3.2.1: Assets impaired	BoP reference field not included in table	Asset description, Impairment amount \$ nominal, Impairment date, Basis for impairment	Actual	SAP	Management tested the VicHub Cash Generating Unit, including allocated goodwill for impairment as part of its usual annual impairment testing for December 2022 financial reporting purposes in accordance with Australian Accounting Standard requirements, with no impairment recognised. In assessing the position as at December 2022, management considered both external and internal indicators of impairment such as; changes in the regulatory environment, current and future performance, asset characteristics, physical damage, business environment and market conditions. No impairment was noted as part of testing indefinite life intangible assets therefore no impairment has been recognised for the year ended 31 December 2022.	N/A
Table 3.2.2: Asset impairment reversals	BoP reference field not included in table	Asset description, Prior Impairment amount \$ nominal, Impairment date, Basis for impairment, Reversal amount \$nominal, Reversal date, Basis for Reversal	Actual	SAP	No assets impairment reversals were recorded during the reporting period. Table 4.1: Recovered capital method - pipeline assets	Shared Assets	2003 - 2022	Additions BoP Reference: 4.1.f	Actual	SAP FAMR: • VicHub	 No Shared asset additions were noted based on performing the following review. The SAP FAMR was exported into an excel file. Asset were aggregated by year based on the year within the Capitalisation date (date field). Shared assets were identified based on: analysis of the FAMR Asset description & Asset class; input from engineers and subject matter experts; and where relevant, analysis of a separate corresponding equipment listing report which contains more detailed information than the FAMR. Shared asset additions were aggregated by year based on the year within the field 'Capitalisation date'. Asset additions would be understated to the extent that assets purchased in the past have since left the fixed asset register, either because they were replaced or disposed of. 	No material replacements or disposals over the life of the pipeline. Pipelines are a stable asset and it is reasonable to expect that there would be minimal disposals.

Table 4.1: Recovered capital method - pipeline assets	Return of capital	2004	Revenue, Operating expenses BoP Reference: 4.1.g	Estimate	Return of capital – Revenue, Operating expenses (2004)	Actual 2005 data was used as a basis to estimate 2004 revenue and operating expenses. The 2005 amounts were adjusted for inflation using Australian Bureau of Statics (ABS)/Reserve Bank of Australia (RBA) CPI rates to estimate 2004 revenue and operating expenses.	The only revenue of the entity was pipeline revenue. Assume no material non-cash items included in revenue receipts and operating expenditure.
Table 4.1: Recovered capital method - pipeline assets	Return of capital	2005 - 2022	Revenue, Operating expenses BoP Reference: 4.1.g	Actual	SAP Trial Balance for: • VicHub	A calendar year trial balance was generated from SAP and the revenue and operating expenditure general ledger accounts were aggregated. A review was performed on the relevant general ledger accounts included in the SAP Trial Balance to identify any non-cash general ledger accounts including: • Profit/(Loss) on disposal of assets • Bad Debt expense SAP trial balances were relied upon because statutory accounts are not prepared for the pipeline.	The only revenue of the entity was pipeline revenue. Revenue per the trial balance after removing non-cash items is assumed to align with the cash flow from operating the pipeline.

		Base Information					
Table Name	Asset Descript ion	Year	Item & Basis of Preparation (BoP) Reference	Actual / Estimate ⁴	Source	Methodology	Assumptions
Table 4.1: Recovered capital method - pipeline assets	Return of capital	2007 – 2022	Operating expenses BoP Reference: 4.1.g	2007 – 2018: Estimate due to VicHub cost allocation 2019 - 2022: Actual	2007 – 2018: EGP RCM Model 2019 - 2022: SAP Trial Balances	Maintenance operating expenses were undertaken on behalf of VicHub by the EGP over the period from 2010 to 2018, inclusive. The maintenance operating expenditure was estimated based on a 2018 engineering estimate which was then adjusted for inflation. 2019 - 2022 actual Maintenance operating expenditure was sourced from the VicHub SAP trial balance.	No material non-cash items are included in the operating expenditure general ledger accounts reported. Depreciation is the key non- cash item which has been removed. There are no other shared costs within Jemena Group that need to be allocated to VicHub.
Table 4.1: Recovered capital method - pipeline assets	Return of capital	2004 - 2022	Net tax liabilities BoP Reference: 4.1.h	Estimate	 2004: Estimated using 2015 SAP Trial Balances – Revenue & Expenses: VicHub 2005-2022 SAP Trial Balances – Revenue & Expenses: VicHub 	The pipeline is part of a consolidated tax group and does not pay corporate tax as a stand-alone entity. Therefore the net tax liability needs to be estimated. Net tax liability is calculated as: (Profit/(loss) before interest, tax, depreciation and amortisation Less tax depreciation Less interest expense) Multiplied by the tax rate (i.e. 30 percent). Where: Profit/(loss) before interest, tax, depreciation and amortisation equals Revenue less Operating expense	'Net tax liability' is interpreted as the notional cash tax payable that would be payable if the pipeline was a stand-alone entity. When estimating each year's tax depreciation, current year net capex was assumed to be incurred mid-year and therefore only a half year of tax depreciation was incurred. The value of imputation

	Base Information			Population Approach

Table 4.1: Recovered capital method - pipeline assets	Return of capital	2003-2022	Return on Capital (Rate of return) BoP Reference: 4.1.i	Estimate	The rate of return is estimated with reference to the following source inputs. <i>Gearing</i> <i>assumption input</i> <i>source</i> : • Asset betas adopted by Australian Competition and Consumer	Weighted Average Cost of Capital (WACC)VicHub estimates the rate of return as the nominal vanillaWACC. This approach estimates the rate of return as the weighted average of opportunity costs assessed across two sources of capital funding: debt and equity. $WACC^{vanilla} = gearing \times r_d + (1 - gearing) \times r_e$ Where: r_d is the cost of debt, and r_e is the cost of equity.Gearing The proportion of debt funding 'gearing' has been	Gearing assumption The proportion of debt funding to capital is referred to as 'gearing'. VicHub applies an assumption of 50 percent gearing, constant over time. The gearing assumption reflects reliance on the regulatory risk assumption but takes into account evidence that the gearing adopted by	

Commission (ACCC) and AER since 1998. • Asset betas identified by TDB and Frontier	 sourced based on guidance from previous, current, forecast financial information used in statutory, management and budgeting reporting. The asset beta that we use is calculated as: the regulatory asset betas adopted by the ACCC and AER since 1998, which has been paired with a gearing assumption of 60 percent; plus the asset beta for samples of businesses with unregulated revenues identified by TDB and Frontier described above), at gearings of 39 percent and 28 percent respectively; less the asset beta for samples of businesses with regulated revenues identified by TDB and Frontier (described above), at gearings of 40 percent and 43 percent respectively. The service provider considers that a gearing that is consistent with the formulation of asset beta is 50 percent. 	unregulated businesses is lower than that of regulated businesses. Imputation credits assumption VicHub assumes the value of imputation credits ('gamma') is equal to zero reflecting SGSPAA shareholders' tax status in Australia. This assumption is also applied to previous shareholders.
Cost of debt and risk free rate input source: Reserve Bank of Australia, Indicative Mid Rates of Australian Government Securities – 1992 to 2008 – F16, and Indicative Mid Rates of Australian Government	Cost of debt The cost of debt in each year is estimated as a prevailing cost of debt across the RCM capital base using the yield on corporate bonds with a broad BBB rating, and terms ranging from one to 10 years. A 10 year yield on Australian Government Securities (AGS) was calculated on each day using linear interpolation between the yield of the bond with the highest term that is less than 10 years and the yield of the bond with the lowest term that is more than 10 years. Each interpolated 10 year yield was then converted from	Cost of debt and tenor assumptions The cost of debt is calculated under the assumptions that: • VicHub aims to achieve a debt portfolio that is 'staggered' so that debt falls due in relatively equal amounts on a year to year basis, limiting refinancing risk; and

Table Name	Asset Descript ion	Year	Item & Basis of Preparation (BoP) Reference	Actual / Estimate ⁴	Source	Methodology	Assumptions
							The Credit Suisse Global Investment Returns Yearbook, prepared by Dimson, Marsh and Staunton, is a well-accepted source of estimates for average excess returns. The 2017 edition of the yearbook estimates the arithmetic average premium of Australian equities over Australian government bonds to be 6.6 percent over the period from 1990 to 2016. ⁶ Importantly, this estimate includes only the returns from dividends and capital gains, and is not grossed up for the value of imputation credits. This estimate is therefore consistent with a value for gamma of zero. MRP of 6.6 percent represents our best estimate of a historical average of excess market returns, consistent with valuing imputation credits at zero.

Explanation for Estimated Amounts

For estimated amounts, in accordance with the Guideline Section 7 Basis of preparation, the following table explains:

- why it was not possible for the service provider to provide actual information;
- what steps the service provider took to locate actual information;
- if an estimate has been provided, the basis for the estimate, including the methods, assumptions and inputs used
- why the estimate represents the best estimate possible in the circumstances and has been arrived at on a reasonable basis.

ESTIMATED INFORMATION

	E	Base Info	rmation	Population Approach	Why it was not possible for the	Steps SGSPAA took to locate	Basis for the estimate, including	Why the estimate represents the best
Table Name	Asset Description	Year	Item	Actual / Estimate	SGSPAA to provide actual information	actual information;	the methods, assumptions and inputs used	estimate possible in the circumstances and has been arrived at on a reasonable basis.
Table 4.1: Recovered capital method - pipeline assets	Pipeline Assets	2003 – 2022	Negative residual value	Estimate	Cost have not yet been incurred to decommission the pipeline, therefore an estimate is inherently required to measure future costs. Further, the actual timing of decommissioning the pipeline is also uncertain, therefore increasing the level of estimation required. In addition, the CPI escalation factor and the discount rate inputs are estimates used to inflate for forecast future price increases and then discount to the present value respectively.	No steps taken as actual information does not exist	The EGP engineering estimate was updated with VicHub data replacing the EGP data as a basis to estimate the cost of decommission the pipeline.	 The estimate is a best estimate because it has been calculated based on the following inputs which are sourced based on best available information: Independent technical engineering estimate for EGP adapted to estimate the VicHub pipeline. Discount rate: 5 year average for the 15 year Australian Government Securities (AGS) bond rate. CPI escalation: SGSPAA internal CPI estimate (reasonable when compared with Australian Bureau of Statistics (ABS) rate). Estimated year of decommissioning the pipeline.

	E	Base Information			Why it was not possible for the SGSPAA to provide	Steps SGSPAA took to locate	Basis for the estimate, including	Why the estimate represents the best
Table Name	Asset Description	Year	Item	Actual / Estimate	actual information	actual information;	the methods, assumptions and inputs used	estimate possible in the circumstances and has been arrived at on a reasonable basis.
Table 4.1: Recovered capital method - pipeline assets	Pipeline Assets, Shared Assets	2003 – 2004	 Pipeline Assets: Maintenance capitalised Shared Assets: Construction cost or acquisition cost (where allowed) apportioned, Maintenance capitalised, Disposal (at cost) 	Estimate	Data for these items was not available prior to the service providers ownership of the pipeline.	Information requests were sent to previous owners but no response was received.	No transactions for these items were noted over the SGSPAA ownership period. Estimated that there were no transactions for these items in the pre- acquisition period based on the assumption that the data would be consistent.	Data from the post-acquisition period is actual data. This actual data represents the best source for arriving at a best estimate.
Table 4.1: Recovered capital method - pipeline assets	Pipeline Assets	2003 – 2006	Disposals (at cost)	Estimate	SAP FAMR and general ledger transactional data was not available prior to the SGSPAA ownership period.	Information requests were sent to previous owners but no response was received.	Analysis of SAP FAMR reports for each year since 2007 did not identify a significant level of disposals. Therefore it is unlikely that there would be a material level of proceeds on disposal to use as an input. The SAP FAMR does not report on proceeds on disposals but it can be used as a reference point to assess the level	Data from the SGSPAA ownership period is actual data. This actual data represents the best source for arriving at a best estimate.

	E	Base Information			Why it was not possible for the SGSPAA to provide	Steps SGSPAA took to locate	Basis for the estimate, including	Why the estimate represents the best estimate possible in the
Table Name	Asset Description	Year	Item	Actual / Estimate	actual information	actual information;	the methods, assumptions and inputs used	circumstances and has been arrived at on a reasonable basis.
Table 4.1:			Duranting				of disposals. Pipelines are a stable asset and it is reasonable to expect that there would be low levels of asset disposals and therefore proceeds on disposals of pipeline assets would be immaterial.	
Recovered capital method - pipeline assets	Return of capital	2004	Revenue, Operating Expenditure	Estimate	The 2004 period is prior to the service provider's acquisition of the pipeline therefore the service provider does not have the relevant data.	Information requests were sent to previous owners but no response was received.	Actual 2005 data was used as a basis to estimate 2004 revenue and operating expenses. The 2005 amounts were adjusted for inflation using Australian Bureau of Statics CPI rates to estimate 2004 revenue and operating expenses. The operations of the pipeline would be stable over the missing data	Actual 2005 data before the missing data period is the best data source to use as an input for estimating 2004 revenue and operating expenses because it is reasonable to expect that the operations of the pipeline would not change significantly year on year.

	l	Base Information			Why it was not possible for the SGSPAA to provide	Steps SGSPAA took to locate	Basis for the estimate, including	Why the estimate represents the best estimate possible in the
Table Name	Asset Description	Year	Item	Actual / Estimate	actual information	actual information;	the methods, assumptions and inputs used	circumstances and has been arrived at on a reasonable basis.
							period. The only revenue of the entity was pipeline revenue.	
Table 4.1: Recovered capital method - pipeline assets	Pipeline Assets	2010 - 2018	Operating expenses	Estimate relating to VicHub costs recorded within EGP	Maintenance operating expenses were undertaken on behalf of VicHub by the EGP over the period from 2010 to 2018, inclusive. Records were not retained to enable the VicHub component to be measured.	Reviewed internal records and concluded that data does not exist to enable the VicHub component to be measured, therefore no further steps were taken to locate actual information.	The maintenance operating expenditure was estimated based on an engineering experts cost build-up of the standard maintenance activities and costs incurred each year for VicHub.	This represents a best estimate because it is built-up based on an asset specific information and understanding i.e. an engineering experts understanding of the standard maintenance activities and costs incurred each year for VicHub.
Table 4.1: Recovered capital method - pipeline assets	Return of capital	1990 – 2022	Net tax liabilities	Estimate	VicHub is part of a consolidated tax group and does not pay corporate tax as a stand- alone entity. Therefore the net tax liability needs to be estimated. Actual total asset data was not available for each	No steps taken as actual information does not exist for net tax liabilities. Actual total asset data was not available for each of the pipelines EGP, QGP and VicHub from 2008 to 2011.	Estimated based on calculation Profit/(Loss) before tax. Less Tax Depreciation Less notional interest Multiplied by the corporate tax rate (30	The estimate represents a best estimate because wherever possible an actual reference data point has been used as a basis to calculate the estimate Accounting profit is the best approach for calculating the cash flows each year and therefore is the most appropriate input into

	E	Base Info	rmation	Population Approach	Why it was not possible for the SGSPAA to provide	Steps SGSPAA took to locate	Basis for the estimate, including	Why the estimate represents the best estimate possible in the

15. CAPITAL EXPENDITURE

Table	Base	Information Population Approach					
Name	Reference	Item	Actual / Estimate	Source	Methodology	Assumptions	
Table 4.1.1: Capital expenditure greater than 5 percent of construction cost	4.1.1.a	Description of works, Date recognised, Expenditure (\$ nominal)	Actual	SAP (Referencing the RCM template)	VicHub analysed the underpinning data for the RCM template and with a view to identifying any projects where capex is greater than 5% of the construction cost. VicHub did not have any capex that met the criteria of the template.	VicHub has interpreted that the capex required in the template is for the life to date basis for the pipeline.	

16. WEIGHTED AVERAGE PRICES

Table	Base Information		Population Approach	0		
Name	Reference Item Actual / Estimate		Source	Methodology	Assumptions	
Table 5.1 Weighted average prices	5.1.a	Volume Weighted average prices	Estimate	The PypIT system is the billing/invoicing system in place which provides the detailed breakdown of volumes and revenue data by service type and shipper as well as the corresponding contract information. Hence, this is the best source to provide data for the purposes of calculating the weighted average price since it is the only system that captures information related to revenue, volume and category breakdown and details in the same place.	 Data extracted from PypIT is compared and checked against SAP balances and reference tariffs before being categorised accordingly based on service type per details below. Where necessary data has been manually categorised as follows: <u>Categorisation of Charge Method</u> The "Postage Stamp Transportation Services" represents revenue and volumes associated with Firm Injection, and As Available Withdrawal services. Per Section 5 of the Guideline, these services are where the same charge is payable along the length of the pipeline, irrespective of the distance transported. Firm services are charged on a capacity basis i.e. Maximum Daily Quantity (MDQ), while As Available services are charged on a volumetric basis (i.e. actual deliveries). Actual revenue for each transportation service is captured separately in pypIT, therefore estimates are not required to allocate revenue to each transportation service. <u>Volume Calculation</u> The volume used in the weighted average price calculation is based on the service type. For example, Firm Services, 	Some specific charges / services are not relevant to the weighted average price calculation (i.e. not part of the service categories required under the weighted average price template as specified in Section 5 of the Guideline. This is discussed further below. In determining the total revenue to be used in calculating the weighted average price, there are certain service types which fall under "Other pipeline services (if relevant) " in Table 2.1.1 that should be omitted from the weighted average price calculation as it does not form part of the main pipeline revenue generating services. This
					volumes are based on MDQ. To obtain the total relevant volumes for a particular month, the MDQ needs to be multiplied	generating services. This includes:

WEIGHTED AVERAGE PRICES — 16

Table	Base	nformation	Population Approach	Sauraa		Accumptions	
Name	Reference	ltem	Actual / Estimate	Source	Methodology	Assumptions	
					out by the number of days in the month. For As Available Services, the actual delivery volumes would apply. Volume data have been estimated for each service and charge reported in the template by adjusting raw data obtained from the PypIT reports. Manual calculations have been performed to calculate the relevant volumes to be included in the WAP calculations.	 Minimum Monthly Service Charge Odorisation Charge Authorised Overrun Charge Unauthorised Overrun Charge Unauthorised Overrun Charge The invoice data in PypIT reflects actual invoicing and has been used as the basis of allocation. Based on the invoice data retrieved from PypIT, the revenue and volume data used in the weighted average price calculation is included/excluded based on the revenue charge type and service type categorisation. 	
						The MDQ used in the calculation (as referred to in the methodology) is the applicable MDQ on the last day of the month. The volume calculated is therefore only an estimated	

16 — WEIGHTED AVERAGE PRICES

Table 5.1.1 AER Exemptions	No BoP Reference cells in the template	AER exemptions	Actual	PypIT System as per description in Table 5.1	Based on a report generated by PypIT, the number of customers by service type by pipeline can be determined. Based on this information, no service types by zone that have no more than 2 shippers who have used this service during the year were identified, therefore there were no applications to the AER for exemptions in accordance with section 5.3 of the Guideline.	N/A

18. ESTIMATED INFORMATION

Table Name	Base Information		Population Approach			Steps Jemena Group	Basis for the estimate, including	Why the estimate represents the best
	Reference	ltem	Actual / Estimate	Source	Why it was not possible for the Jemena Group to provide actual information	took to locate actual information	the methods, assumptions and inputs used	estimate possible in the circumstances and has been arrived at on a reasonable basis.
Table 5.1 Weighted average prices	5.1.a	Volume	Estimate	As Above	This is due to the system limitations of PypIT as it was not built for this reporting purpose.	Jemena Group is currently working towards developing a PypIT report that captures the relevant data for the WAP calculation. A planned completion date for these software changes has not been finalised.	PypIT contains contract details (MDQ, tariff and terms), nominations, invoice amounts, pipeline schedules and actual deliveries for all our shippers and services. Currently there is no report in place in PypIT that provides the data in a way to be used to calculate the WAP. VicHub is required to manually extract the relevant information to be used in the calculations and include/exclude components in the calculations based on the assumptions	This is the best estimate given the information available from PypIT. We are not aware of any alternative information available to us at this time.

18 — ESTIMATED INFORMATION

Table Name	Base In	formation	Population Approach	Why it was not possible for the Jemena Group to provide actual information	Steps Jemena Group took to locate actual information	Basis for the estimate, including the methods, assumptions and inputs used	Why the estimate represents the best estimate possible in the circumstances and has been arrived at on a reasonable basis.
