This newsletter provides the latest updates on the Kendall Bay Sediment Remediation Project. All newsletters are available on our website www.jemena.com.au

Project Update

Jemena has selected the preferred contractor to carry out the remediation work through a tender process. The preferred contractor is Ventia who have been selected on its past record of remediation work and the proposed approach for the work in Kendall Bay.

The Remediation Action Plan (RAP) for the project and related technical documents such as the Human Health Risk Assessment (HHRA) and the Environmental Risk Assessment (ERA) were submitted to EPA early this year in January. Review comments received from EPA and site Auditor required further technical clarifications and more explanation on how the remediation areas were defined.

Jemena has continued to meet with the regulatory agencies, including the NSW Department of Planning and Environment, the Roads and Maritime Services, and the EPA, to refine the proposed remediation approach.

Recent sampling in Kendall Bay and adjacent bays

In response to EPA and Auditor comments on the RAP, further sampling in Kendall Bay and adjacent bays was completed in October. The reports may not be finalised until March 2018, however some indication on the preliminary results is expected by late January 2018.

Community Liaison Group Meeting

The Kendall Bay Community Liaison Group (CLG) met on 24 May 2017 and received an update on the project. Summary notes of the discussion are available at:

The next CLG meeting is planned for February 2018 with contractor representatives in attendance. This will provide an opportunity to the CLG members to meet with the contractor and understand their methodology including the trial of the proposed in-situ solidification remediation method.

An update on the findings from the additional sampling will also be provided during this meeting.

Next Steps

Jemena’s consultants are in the process of revising the RAP to address the comments received from EPA.

Following finalisation of the RAP, the Environmental Impact Statement (EIS) will also be finalised. The EIS references the RAP and also includes a number of other important health, environmental, engineering and social impact studies.
Community Information Stall at the Spring Fair

On Sunday 10 September, Jemena set up an information stall at the Spring Fair at the beautiful Breakfast Point Oval. The event was organised by the local organisation and provided Jemena an excellent opportunity to provide latest project information to the local community coming to enjoy a family fun day. There were market stalls, music, food and drinks, rides and other activities for entertainment.

Jemena’s stall presented a perfect opportunity for visitors to learn about the Kendall Bay Remediation Project. The stall was managed by the Kendall Bay Remediation Team.

The Jemena information stall also provided the Remediation Team the chance to mingle with the visitors. With the help of posters the team explained the planned remediation activities and the time frames for these works.

The Jemena showbags containing practical items were hugely popular with the crowd.

The table below summarises next steps in the project and expected timing. Timing will depend on the review times required by the NSW Government regulatory agency processes.

| From early to mid 2018 | InSitu Solidification trials in the Bay  
| EIS on public exhibition  
| EIS submissions and responses by Jemena  
| State Significant Development (SSD) Application lodged with DP&E |
| Late 2018 | Project approval expected |
| Early 2019 | Subject to DP&E approval, commencement of remediation works  
| Remediation expected to take 18 months |
| Late 2019 | Remediation work completed |
