Tariff Adjustment

The annual tariff adjustment formula is:

$$T_n = T_{n-1} \times \left[1 + \left(\frac{CPI_{n-1} - CPI_{n-2}}{CPI_{n-2}} \right) \right]$$

Where:

T_n = relevant Service Charge, applicable from Review Date (in year n)

T_{n-1} = relevant Service Charge in year n-1, year prior to the Review Date

CPI = Consumer Price Index (All Groups weighted Average of Eight Capital Cities) published quarterly by the Australian Bureau of Statistics.

CPI_{n-1} = CPI published for the September quarter immediately before relevant Review Date (September quarter in year n-1)

CPI_{n-2} = CPI published for the September quarter for the year prior to the year before the Review Date (September quarter in year n-2)

Review Date = 1st January each year
